

PROJECT TESTING

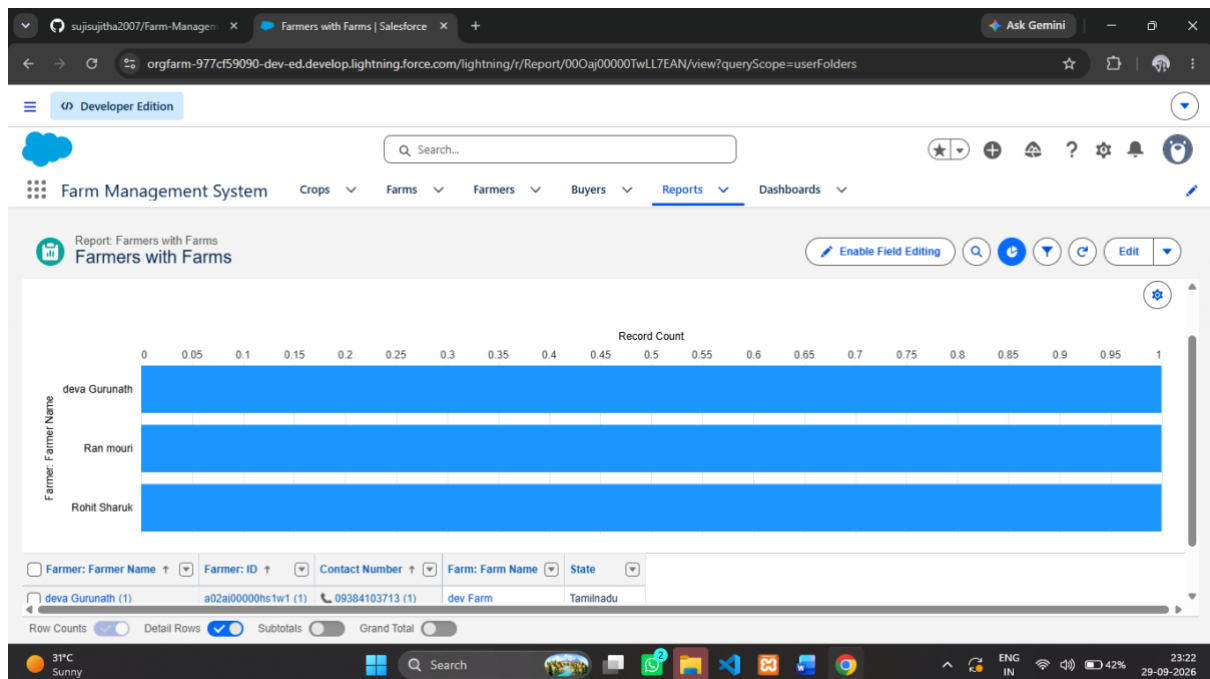

Testing

The Farm Management System was tested using the Salesforce interface to verify the functionality and proper working of the application.

Functional Testing

The following functionalities were tested:

- Creation of Farm records
- Creation of Crop records
- Creation of Farmer records
- Creation of Buyer records
- Validation of input fields
- Verification of relationships between objects
- Verification of field dependencies
- Profile and role access testing
- Sharing rule verification
- Report generation
- Dashboard generation

Performance Testing

Performance testing was carried out to ensure that the system provides smooth response and stability while performing multiple user operations.

Testing Outcome

The testing process verified the major functionalities of the Farm Management System, including data creation, validation, relationships, user access, sharing rules, reports, and dashboards.
